Details of M. tuberculosis sequencing at the Sanger Centre are available on the World Wide Web.

(URL, http://www.sanger.ac.uk/Projects/M_tuberculosis/) CDS have been renumbered from the original cosmid submissions but the old gene designations are in brackets after the new gene numbers. Gene prediction was based on a Hidden Markov Model of TB genes implemented in TBparse (Krogh) supplemented with visual inspection of positional base preference in codons, especially where there is an increase in the observed/expected third position G + C. CAUTION: In some cases we may not have predicted the correct initiation codon. Where possible we choose an initiation codon (atg, gtg, or ttg) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation codon). If this cannot be identified we choose the most upstream
13246 bp DNA linear BCT 02-SEP-2002
Mycobacterium tuberculosis H37Rv complete genome; segment 125/162.

This work was done in collaboration with Haruo Ikeda(*1), Jun
Ishikawa(*2), Akiharu Hanamoto(*3), Chiquea Takahashi(*3), Mayumi
Shinose(*4), Norihiro Kushida(*4), Hisashi Kikuchi(*4), Tomomi
Osonoe(*4), Norihiro Kushida(*4), Hisashi Kikuchi(*4), Tadayoshi
and Satoshi Omura(*1,*3).

Final finishing process and all annotation were done by H. Ikeda
and J. Ishikawa.
